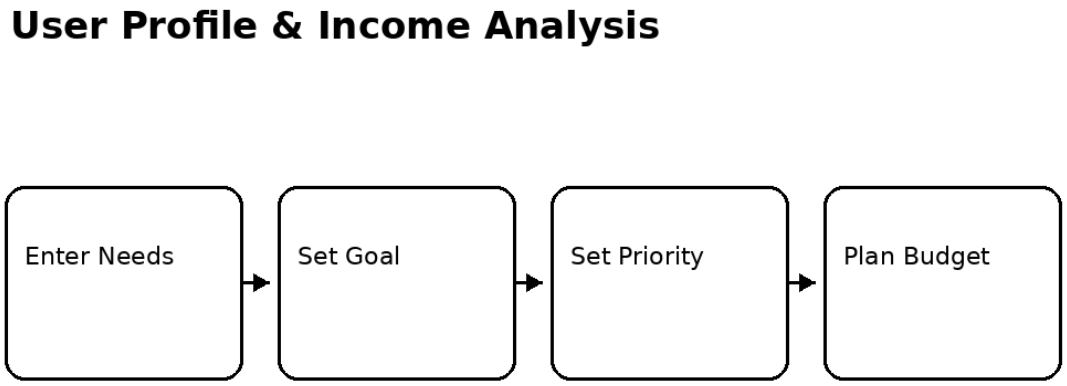
# 2.3 Financial Needs and Goals

## 1. Introduction

Financial Needs and Goals allows users to specify what they want to achieve with their money. Financial priorities can differ from one user to another. A user may want to save for education, purchase a device, plan a trip, build general savings or prepare for a future expense. The system stores these goals and considers them when creating budgets, savings plans and financial recommendations.



## 2. Objectives

• Allow users to define personal financial goals.

• Record the target amount for each goal.

• Set priorities for different goals.

• Connect goals with budgeting and savings plans.

• Track goals as active, completed or pending.

## 3. Detailed Working Process

• The user enters a goal name and description.

• A target amount is specified.

• A target date may be added.

• The user can identify the priority of the goal.

• The system stores the goal information.

• Budget and savings planning can use the goal details to allocate available income.

## 4. Key Features

• Goal name

• Target amount

• Target date

• Priority level

• Goal status

• Budget and savings integration

## 5. Benefits

• Makes financial planning more personal.

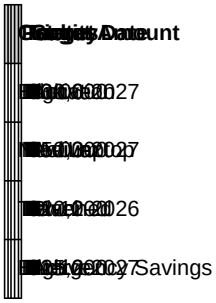
• Helps users focus on important targets.

• Connects financial goals with available income.

• Supports organized savings planning.

• Makes future financial needs easier to prepare for.

## 6. Sample Data Table



## 7. Sample Python Coding

```
# Financial Needs and Goals
goals = []

name = input("Enter goal name: ")
target = float(input("Enter target amount: "))
priority = input("Enter priority (High/Medium/Low): ")
date = input("Enter target date: ")

goals.append({
"name": name,
"target": target,
"priority": priority,
"date": date
})

print("\n--- FINANCIAL GOAL ---")
print("Goal:", name)
print("Target: ■", target)
print("Priority:", priority)
print("Target Date:", date)
```

## 8. System Integration

This module can be connected with expense tracking, savings, budgeting and reporting modules. The user's income, spending behavior and goals can be combined to create a more personalized financial

management workflow.

## 9. Conclusion

User Profile & Income Analysis provides the basic information required for personalized financial planning. By combining income details, spending habits and financial goals, the system can organize budgets and recommendations around the user's actual financial information.
