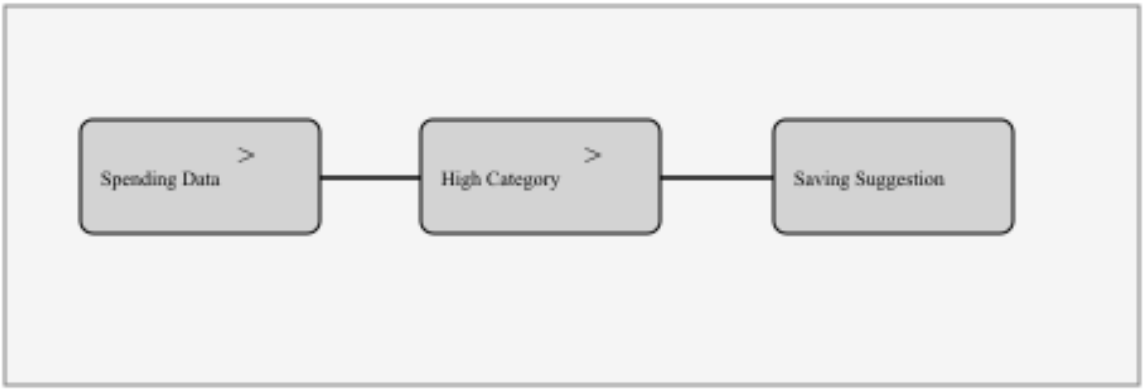
Section 6.1

Money-Saving Suggestions



The assistant provides practical suggestions based on the user's spending behavior. It studies expense categories and identifies areas where spending is relatively high.

For example, if food, entertainment, shopping, or transportation expenses increase beyond the user's usual pattern, the system can suggest practical ways to control those expenses.

The recommendations focus on reducing avoidable spending while protecting essential requirements. This helps users save money and gradually improve their financial habits.

Coding Table

Component	Purpose	Example
Input	Collect spending information	Monthly category expenses
Analysis	Find high-spending categories	Food = ■5,000
Recommendation	Suggest a saving action	Reduce non-essential food spending
Output	Show personalized advice	Potential monthly saving
