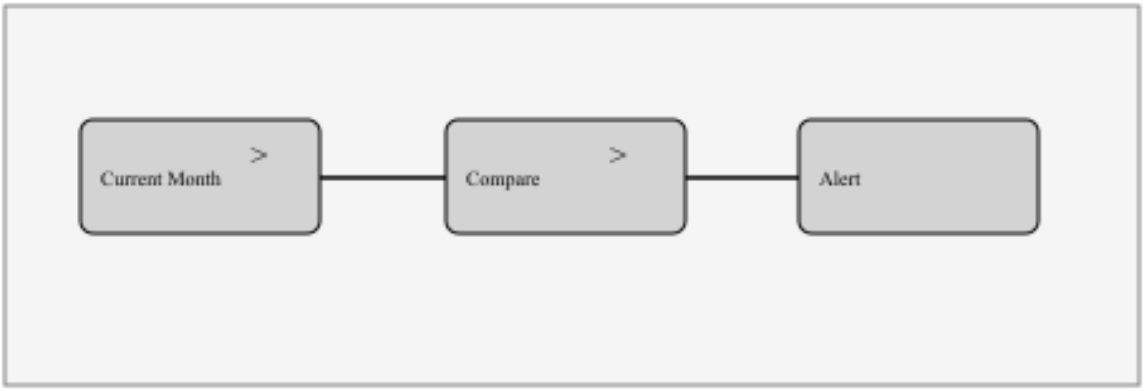
Section 6.2

Unnecessary Expense Alerts



The system can identify unusual or potentially avoidable expenses by comparing current transactions with previous spending patterns.

When a particular category increases significantly, the assistant can generate an alert. For example, if shopping expenses are much higher than the user's normal monthly amount, the system can notify the user.

These alerts improve awareness of financial decisions and allow users to review their transactions before spending becomes difficult to control.

Coding Table

Component	Purpose	Example
Current Data	Read recent transactions	Shopping = ■4,500
Previous Data	Compare historical spending	Usual = ■2,000
Detection	Identify unusual increase	125% increase
Alert	Notify the user	Review shopping expenses
