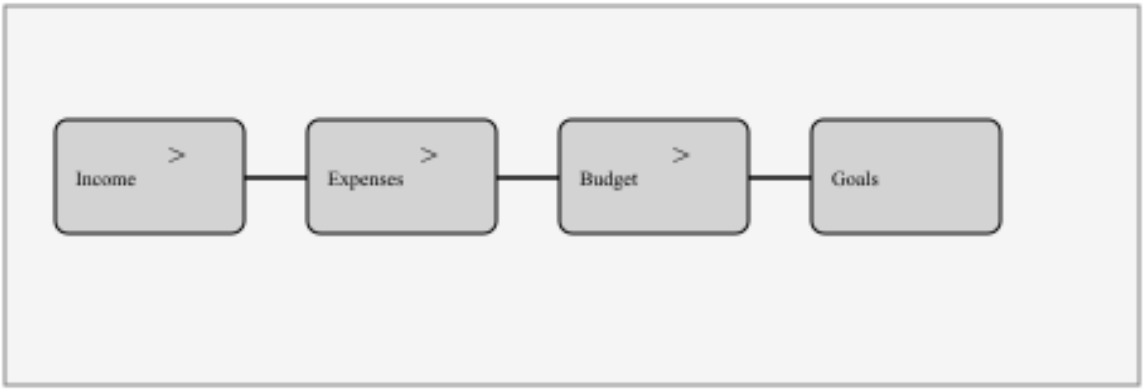
Section 6.3

Personalized Financial Tips



Instead of giving generic financial advice, the assistant uses information such as income, expenses, budget limits, and savings goals to generate relevant suggestions.

For example, a user with a strict monthly budget may receive suggestions to control discretionary spending, while a user with a specific savings goal may receive tips focused on reaching that target.

Recommendations can change as the user's financial situation changes. This makes the assistant more useful for long-term financial management and supports better planning.

Coding Table

Input Factor	How It Is Used	Example Tip
Income	Understand available money	Set a realistic spending limit
Expenses	Identify spending patterns	Reduce avoidable categories
Budget	Check limits	Stay within monthly budget
Savings Goal	Track target progress	Increase regular savings
