8. Reports & Dashboard

8.2 Monthly Financial Reports

The system generates monthly financial reports that provide a structured summary of the user's financial activities. The report collects transaction information for a selected month and presents the important figures in a simple format.

A monthly report can include total income, total expenses, category-wise spending, savings, number of transactions, and remaining balance. These values help users understand how their money was received and spent during the month.

Users can compare reports from different months to identify long-term financial trends. For example, an increase in transportation or shopping expenses can be noticed by comparing monthly category totals.

The reports can also be used as a record for personal financial planning. By reviewing previous months, users can understand their regular spending pattern and plan future budgets more effectively.

Key Features

• Monthly income summary

• Monthly expense summary

• Category-wise spending details

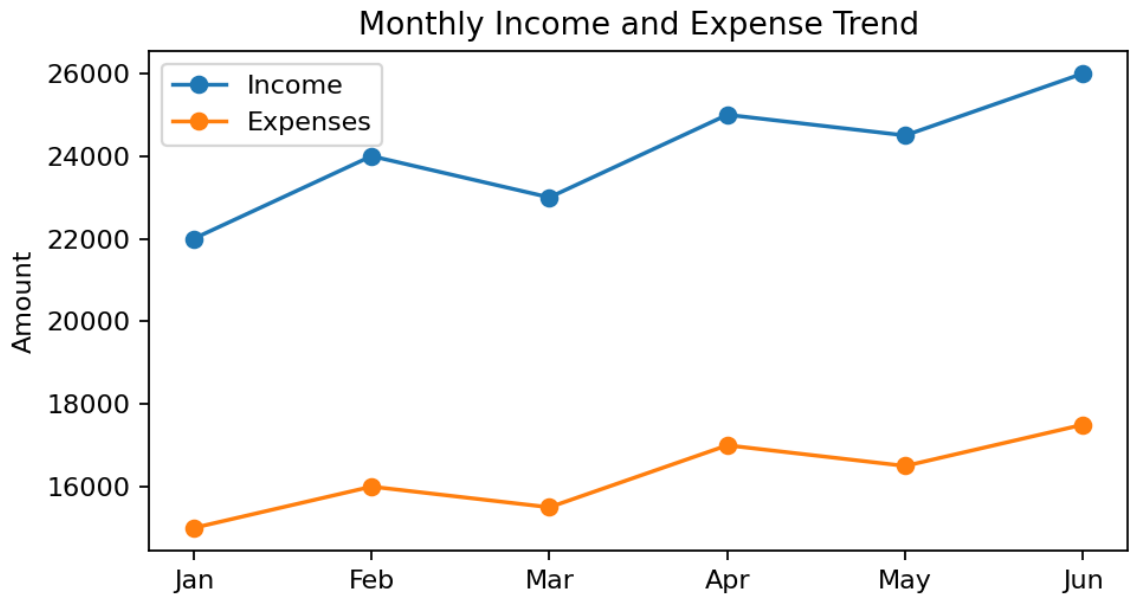

• Savings calculation

• Month-to-month comparison

• Financial trend identification

• Printable or downloadable report format

Illustrative Dashboard

Coding Table

Component	Example Code / Function
Get monthly data	report = getMonthlyReport(month);
Calculate income	income = report.getTotalIncome();
Calculate expenses	expense = report.getTotalExpense();
Calculate savings	savings = income - expense;
Generate report	generateMonthlyReport(report);
