8. Reports & Dashboard

8.3 Budget and Savings Summary

The dashboard provides a simple and clear summary of the user's budget, expenses, remaining balance, and savings progress. All important financial information is placed in one location so that users can understand their current position quickly.

The budget section allows users to compare the amount they planned to spend with the amount they have actually spent. The remaining balance is calculated automatically after expenses are deducted from the available budget.

Savings progress can be displayed using a percentage, progress bar, or chart. This makes it easier for users to track whether they are moving toward their savings target.

The system can also display alerts and recommendations. For example, an alert may be shown when spending approaches the budget limit. These notifications help users monitor their financial activity and make timely budgeting decisions.

Key Features

• Monthly budget display

• Total expense tracking

• Remaining balance calculation

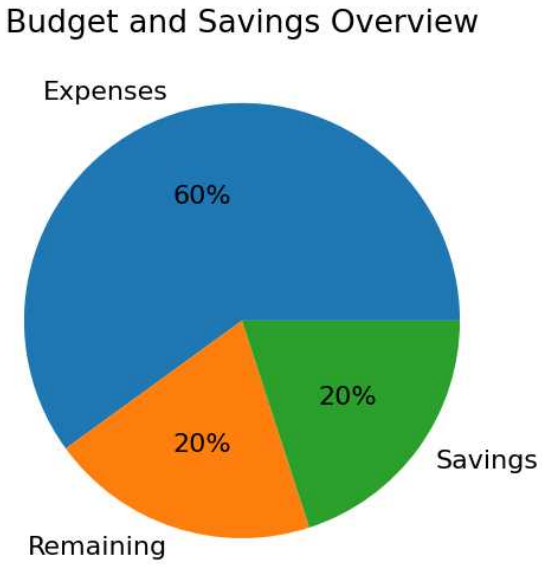
• Savings progress indicator

• Budget limit alerts

• Financial recommendations

• Single-screen financial overview

Illustrative Dashboard



Coding Table

Component	Example Code / Function
Get budget	budget = getMonthlyBudget();
Calculate balance	balance = budget - totalExpense;
Calculate savings	savings = totalIncome - totalExpense;
Show progress	showSavingsProgress(savings);
Check alerts	checkBudgetAlerts(balance);
